Manufacturing for Design

Whatever your goals for Additive Manufacturing are, you'll only reach them if you design towards them from the start. That could mean bringing down costs, eliminating assembly time, improving functionality or aesthetics. As your partner in design for Additive Manufacturing, we support you in every stage of the design process. From the co-creation of the concept, to product development, rapid prototyping and serial manufacturing.

- ✓ Engineering expertise to get you the most out of AM
- ✓ Optimal functionality and esthetics using freedom of design
- ✓ Expert design advice on technology and material choices

Frequently Asked Questions

- › **How can I register my software?**
- › **Activating a software without a key file**
- › **Activating a software with a key file**
- ✓ **How can I reactivate my software in case of emergency?**

Every software license that is under maintenance comes with the possibility of obtaining an emergency key file. This measure exists in case your software deactivates by accident and the normal reactivation process does not work. This key file reactivates your software for six days, which allows you to continue your work in case of emergency, while our support team will help you to reactivate your software.

- › **How long will my software remain activated?**
